

City® Series

FinBin® City Series was designed by Hannu Kähkönen for the City of Helsinki, Finland. FinBin® Products brought its expertise to the project as a manufacturer of the litter bin products. The product planning was based on studies carried out on how to empty a litter bin easily, safely and efficiently. At the same time, special attention was paid to developing the product's strength against vandalism and other mechanical stress.

The timeless design of the FinBin® City Series fits into any surrounding. Its numerous sizes, fastening options as well as the wide selection of colours offer an abundance of opportunities to build a uniform look that can be repeated where necessary. Products are supplied in stainless steel or powder coated galvanized steel.

The precisely measured shape and size of the aperture makes it easy to use and keeps the rain and birds out. The front

door is hinged and locked. Inside there is a galvanised steel liner that is easy and safe to empty.

An eye-catcher model City Castle is easy to approach and helps to keep surroundings clean. The structure is both sophisticated and vandal proof.

All City Series litter bins except City Castle can be equipped with a cigarette disposal unit.

City 30

City 60

City 100

City 140

City Combi

City 60 Doggy

City Castle

City Terra

City Combi is a litter bin with a separate tube-formed, easy to empty cigarette disposal unit. City Combi version is available for City 30/60/100/140. Most FinBin® City fastening alternatives can be used with this model.

City Doggy can be placed in dog parks and along dog-outing routes. City Doggy has an aperture with a steel flap on a secure metal chute. This ensures the hygienic disposal of the dog waste, diminishes smell and prevents the contents from displaying when using the bin.

City Castle – a sophisticated solution for both traditional and modern environments. The strong but airy structure prevents vandalism and graffiti effectively. City Castle is a free standing litter bin with an integrated metal base.

City Terra is installed partly un-

der the ground and the extra space gives more waste collection capacity. Hinged door. Bag frame for 200 l refuse sack.
