

CDB Bicycle stand

SKC1

The picture is only illustrative, it may not exactly match the product described.

Product description

A supporting parking pillar for bicycles. The basic element is a steel weldment 100x40 mm which a rubber strip 40x5 is attached to. The rubber strip protects a bicycle frame from its possible damage when it touches the metal structure of the parking pillar. The hole located in the top part is used for a bicycle lock. In the design using powder coating, there is a cyclist's icon located under the hole used for a bicycle lock. If requested, it is possible to have it changed for your city symbol or other logo. In the lower (underground) part, the column ends by a support plate used for anchoring.

Material

Steel grade 11, EPDM material
