

VIVID

Suitability

Suitable for bike parking in the vicinity of places such as schools, bus stops, housing companies and shops.

Features

The Vivid bike shelter is now available as a modular version! The standard sizes of the bike shelter (in metres): 4, 6, 8, 10, 12, 14 and 16.

Compatible with nearly all of our bike rack models. Check the table below or contact us for more information or help with designing your shelter.

Vivid is a very stylish bike shelter that saves space. Thanks to its sleek design, the bike shelter is a great fit for more challenging locations that require unobstructed movement and a line of sight to the surroundings. The bike shelter's frame is made up of strong frame pipes. All frame pipes are made of powder-coated steel. The roof, which lets the light through, is made of polycarbonate. You can also get a green roof for the shelter! The shelter is delivered as elements that are fixed to a base or to concrete pads. You can also order the shelter as a pre-assembled product on a concrete slab.

Finbin shelters are CE-marked.

Load-bearing steel structures, such as shelters, must be CE-marked on the basis of the EU Construction Products Regulation that came into force on 1 July 2014 and in accordance with EN1090-1. Lehtovuori Oy has been granted a certificate and the right to CE-mark its shelters by inspection company Dekra.

The Vivid bike shelters are made in Finland.
